SUMMARY Computer Science Engineering fresher with strong fundamentals in core CS subjects and hands-on experience in Python, Java, Machine Learning, and web development. Completed an AI/ML internship and built real-world projects using Flask, NLP, and ML models. Seeking an entry-level Software Engineer role.

EDUCATION

Bachelor of Engineering(B.E), Computer Science and Engineering, Jain College of College, Belagavi - 590014 **Dec 2021 – June 2026**

- CGPA : 8.8/10

Senior Secondary (XII), Science (KARNATAKA board) Edu Asia PU College,Kaur, Ranebennur - 581115 **Jun 2019 - July 2021**

- Percentage : 88.8 %

Secondary (X), (CBSE) **Jun 2018 - April 2019**

Om National Public School, Ranebennur - 581115

- Percentage : 75.4 %

INTERNSHIP

AI and Machine Learning Intern
JCE Innovation & Entrepreneurship Foundation (JIEF), Belagavi, Karnataka
Aug 04, 2025 – Nov 15, 2025

- Completed an AI/ML internship at JIEF (startup), working with Python.
- Build and evaluate machine learning models on real-world datasets.

Project: Automated Loan Eligibility Prediction – used to predict weather applicant is eligible for the loan or not.

PROJECTS

Resume Screening System

- The project uses AI through Natural Language Processing to understand resume and job text. A pre-trained Machine Learning model (Sentence Transformer) is used for semantic similarity. The system compares the meaning of resumes, not just keyword matching.
- The model is able to shortlist the bulk amount of resumes with high accuracy.
- Technologies Used: Python, Scikit-Learn, Fast-API, NLP, Uvicorn, HTML, CSS, JavaScript

Automated Loan Eligibility Prediction

- Technologies Used: Python, Pandas, NumPy, Flask-Framework, ML (Random Forest)
- Developed a Loan Eligibility Prediction System using Machine Learning with CIBIL score-based approval and rejection logic.
- Built a Flask-based web application to provide real-time loan prediction, EMI calculation
- dynamic bank interest rate updates Implemented Explainable AI (SHAP) for clear explanation.

SMS Spam Detection

- Technologies Used: NumPy, Pandas, scikit-learn.
- Built a model to detect spam and phishing messages.
- Analyzes email content and patterns to distinguish legitimate messages from spam.
- The model is able to predict whether the messages is “ham” or “spam” with 96% of accuracy.

SKILLS

Technical Skills

- Languages: Java, Python
- Core CS Subjects: DSA, OOP’s , DBMS, OS,
- CN Web Development: HTML and CSS
- Tools & IDE: VS Code, IntelliJ Idea
- Database Technologies:MySQL

Soft Skills

- Quick Learner and Adaptable
- Attention to detail
- Time Management

CERTIFICATES

- Completed the Generative AI Exchange Program and earned my Prompt Design in Vertex AI badge.
- Certificate of Internship from CODEC TECHNOLOGIES (JAVA Developer Intern).
